

LOKESH KUMAR BHATIA

Product Designer · Bengaluru, India
hi.lokeshux@gmail.com · +91 88242 40078 · lokeshbhatia.com · linkedin.com/in/lkb01

SUMMARY

Product Designer with 3 years of experience across AI, fintech and B2B SaaS. End-to-end ownership — discovery, information architecture, interaction design, design systems — usually as the only designer. At Rupeezy, owned the equity and F&O trading app behind 97% of company revenue and built the partner platform for the channel that referred 35% of it. At Runnable, founding designer on an AI agent platform from concept to public launch.

EXPERIENCE

ZZAZZ AI · Product Designer Dec 2025 – Apr 2026
B2B SaaS for publishers, ~50 people. Content monetisation for the post-AI web: a paywall AI crawlers pay to cross, priced by an ML model.

- Built **Publish**, the publisher product for pricing and publishing articles. AI rewrites, headline options and draft analysis arrive as suggestions the publisher **accepts, edits or ignores**. Nothing applies on its own.
- Rebuilt the payment flow from **7 steps to 4** and made it reusable across products. Readers pay with money or by watching ads.

Runnable AI · Founding Product Designer Sep 2025 – Nov 2025
Pre-seed AI agent platform, ~\$3M raised, 10 people. Generates reports and websites, automates workflows; comparable to Gamma or Emergent.

- Only designer**, no PM, 4 engineers. Owned the product design from first sketch through launch.
- Designed how the agent shows its work: the plan appears before execution, a clarifying question when the prompt is thin, narration throughout. Long tasks stay legible instead of sitting behind a spinner.
- Made failure an explicit state. A wrong result or a stall gives the user a continue-or-restart choice, not a dead end.
- Shipped onboarding and activation, the main conversion path at launch. The product hit a **~\$1M annualised run-rate** in its first month.

Rupeezy · Product Designer Feb 2024 – Aug 2025
Stockbroker founded 2003, digital-first since 2017. ~125 people; 200K+ registered users.

- Owned Rupeezy Trade end to end, the equity and F&O app behind **97% of company revenue**. Each designer owned a product.
- Designed Rise Portal from scratch**. ~100 partners drove 35% of company revenue but couldn't see how referrals converted or how payouts were calculated. **Lead-to-client conversion up 2.4x** in two months; **partner tickets down 48%**.
- Merged Rupeezy Trade and Invest into one app, opening a cross-sell path that didn't exist and cutting maintenance from **4 engineers to 3**.
- Cut KYC drop-off by resequencing around the mandatory PAN step: low-effort steps earlier, bank details into a mobile-native step, progress made visible.
- Rebuilt the Figma design system used by 4 designers and 7 engineers, consolidating **200 button and 140 tag variants** into single components.
- Shipped **30+ features** across onboarding, KYC, dashboards and trading flows, prioritised from app store reviews and in-app feedback. Mentored a design intern.

Sustainability Economics.ai · UI/UX Designer Apr 2023 – Jan 2024
Net-zero carbon accounting SaaS for banks and insurers — Scope 1, 2 and 3, including financed emissions across loan portfolios.

- Sole designer on the platform**, one of six products across a 4-designer team, from rough wireframes to shipped.
- Emissions formulas change with geography, industry and equipment, so a diversified company can't use one method. Built **flexible ingestion** accepting spreadsheets, cloud storage and mismatched schemas instead of one fixed Excel template.

EDUCATION

B.Tech, Chemical Science and Technology — Indian Institute of Technology (IIT) Guwahati 2018 – 2022
Self-taught in product design alongside coursework. UI/UX internships at AgriVision4U and CityMALL.

SKILLS

Product Design: UX Design, UI Design, Interaction Design, Information Architecture, User Flows, Journey Mapping, Prototyping, Design Systems, 0-to-1 Product Design

AI Product Design: Human-AI Interaction, agent transparency and progress states, human-in-the-loop review, failure and recovery states, nondeterministic output

Discovery & Measurement: App store review analysis, in-app feedback surveys, validation testing, post-launch adoption tracking, A/B testing

Tools: Figma, FigJam, Framer, Claude Design, Claude Code, Miro, Jira, Notion, Firebase, MoEngage

Domains: AI Products, Fintech & Trading, B2B SaaS, Sustainability
